

Shiny, Happy Flooring from Flowcrete

•Product: Peran SL •Market Sector: Corporate Offices •Location: Australia •Client: Australia Square
•Date: 2006

Flowcrete has pioneered a state-of-the-art system which creates a shiny floor finish - that is built to last. The company has developed a method of using the time-proven floor finish Peran SL, with a high-performance sealer, to create an extra glossy surface.

As a result, colour and shine – Peran SL is available in a wide-range of shades from vibrant primary colours through to pastel hues – can be brought to floorzones across the globe to create an exciting new look.

The flooring system has been installed at a prestigious location in Sydney Australia - a project which has involved the renovation of an existing facility into a new suite of offices on the 38th floor of Australia Square, a prime office development in the city centre.

Mark Greaves, Managing Director of Flowcrete, which has its headquarters in Cheshire, said: "When we went back to do the photos for this project the floor had already been in use for several months and there was not a scratch or mark to be seen."

"For interior designers, architects and other specifiers, the Peran Collection delivers freedom and creativity to enable them to create designs on the floor, using it as a platform to develop individual styles."

Mark Greaves, Managing Director Flowcrete Group Ltd.
