

## Westfield's Welcome Car Park

• Product: Deckshield & Isocrete K-Screed • Market Sector: Car Parks • Location: UK  
• Client: Westfield Derby • Date: 2007

First impressions count, and visitors arriving at Westfield Derby – which offers one of the UK's largest retail car parking facilities – are offered a warm reception. More than 60,000m<sup>2</sup> of Flowcrete's Deckshield have been applied at the development, creating a welcoming, safe and protective surface underfoot.

The project included the installation of 16,000m<sup>2</sup> of the fast track floor system, Deckshield Rapide, on the top deck and access ramps to a new build car park at the site.

In other areas at Westfield Derby, Deckshield Intermediate was installed across two levels within the structure, as well as in the basement of an existing car park, given a new lease of life under extensive refurbishment works.

Under the package of works, more than 10,000m<sup>2</sup> of Flowcrete's Isocrete K-Screed and 7,000m<sup>2</sup> of Isopol polymer screed – both heavy-duty systems – were installed, underneath Deckshield. Isocrete K-Screed was also applied to fourteen flights of stairs, which were then coated with a quartz system.

Working with other features including effective lighting, Deckshield transforms car parks into people-friendly environments - providing a colourful finish that can introduce design features into the floor. These can include signage and direction within a car park zone, including line markings, as well as pedestrian areas, disabled access and parking zones - and parent with child spaces.
