

Flowcrete's Pioneering System at Ampy+Metering

• Product: Peran ESD SL • Market Sector: Electronic • Location: UK • Client: Ampy+Metering
• Date: 2007

A pioneering antistatic flooring system from Flowcrete is creating the right impression underfoot for a dynamic electronic manufacturing company at their high-technology site located on the Northfield Industrial Estate in Peterborough.

Ampy+Metering is part of the world's leading provider of energy management and measurement systems and is seen as a pioneer in advanced metering.

Ampy+Metering specified an antistatic floor capable of preventing damage to electronic components and sub assemblies caused by static electricity. They also wanted it to promote and reflect the fresh, innovative and modern atmosphere of the new facility. Flowcrete's Peran ESD SL has been installed in the facility in an attractive yellow-grey colour.

Peran ESD SL is an easily cleaned, chemically resistant and hard wearing floor finish, specially formulated as part of an anti-static system. Peran ESD SL is specially formulated to disperse static electricity which is ideal for environments where sensitive electronic components are handled or manufactured, or in clean room environments. It is also suitable for areas where gas, solvents and explosives are handled, and in areas where there is a risk of dust explosions.
