

### Fast Track Check-In at Manchester International Airport

• Product: Flowfast Terrosso • Market Sector: Airports • Location: UK  
• Client: Manchester International Airport • Date: 2008

A bespoke floor finish from Flowcrete - made up of a creative blend of colour and texture – has been applied in just one weekend at Manchester International Airport.

Flowcrete's innovative Flowfast Terrosso - which is ready for use just hours after installation – has been applied across 2,500m<sup>2</sup> in the new £10 million Security Search Area of Terminal 1.

A special design has been created for the area, with an eye-catching blend of blues, silvers and even glitter built into the mix. The design is not only visually appealing, its reflective qualities help lift illumination levels within the building.

Around 15,000 passengers go through Terminal 1's Security Search Area each day, but the unique qualities of Flowfast Terrosso mean the floor's stylish design and appeal withstand the high footfall levels.

Utilising the latest in resin technology, Flowfast Terrosso offers a floor finish that looks good and stands up to all the demands associated with floors for public spaces. The floor offers good slip-resistance, can withstand thermal shocks and impact, and is hardwearing. Its seamless finish also delivers an easy-clean finish that makes it easy to maintain.

*"We are delighted with the end result; it fits perfectly with Manchester Airport's vision of a clean, simple and inviting environment for Terminal 1"*

(Tony Fleming, Aedas Architects)
